Difference in Nomenclature Hazard Numbering System

NFPA 704  HMIS

- 0 to 4- Hazard Classification Range
- 0 is least hazardous and 4 is most hazardous.
- Number system is found in the four-quadrant or section system identifying fire (red), health (blue), and reactivity (yellow).

GHS/HazCom 2012

- 1 to 5- Hazard Classification Range
- 1 is most severe hazard and 5 is least severe hazard.
- Hazard categories are not required on labels but are required on Safety Data Sheets (SDS) in section 2.

Rockwood Casualty Insurance Company (Rockwood) may provide safety management services to its insureds in order to reduce the risk of loss that may lead to insurance claims. The information and advice we provide is not intended to include all possible safety measures and controls. Rockwood does not warrant that losses and claims will be avoided or mitigated if our recommendations are followed. The safety management services we provide do not relieve the insured of its own duties and obligations with regard to safety matters, nor does Rockwood guarantee to the insured or others that the insured’s property and/or operations are safe, healthful, or in compliance with applicable laws, regulations or standards. The insured remains responsible for its own operations, safety practices and procedures and should consult with legal counsel and safety professionals, of its own choosing, as it deems appropriate.
