 - a. Physical imbalance
 - Slip, trip, fall
 - Strain, sprains
 - b. Tool rebound
 - Cuts & bruises
 - c. Moving, falling, and flying parts
 - Caught in machinery
 - Struck by objects

- 2)** What hazards should be recognized?
 - a. Tight areas where work is required
 - b. Any moving parts
 - c. Be aware of your range of motion in these areas
 - d. Know your escape routes
 - e. Be aware of the flooring

- 3)** What safe practices should be used?
 - a. Before working, become familiar with the work area and potential hazards
 - Recognize the all of the hazards stated above under #2
 - b. Determine the correct PPE for the job
 - Guard against flying dirt, dust, or particles
 - Falling parts
 - Sharp Edges
 - c. Make sure you have good footing before starting the job
 - d. Be aware of your hands and other body parts when pushing or pulling

- 4)** Where do we have tight working conditions?
- 5)** What are the main reasons we have to work in these areas?
- 6)** What makes these tight spaces dangerous? (little air flow, poor lighting, awkward positions)

Rockwood Casualty Insurance Company (Rockwood) may provide safety management services to its insureds in order to reduce the risk of loss that may lead to insurance claims. The information and advice we provide is not intended to include all possible safety measures and controls. Rockwood does not warrant that losses and claims will be avoided or mitigated if our recommendations are followed. The safety management services we provide do not relieve the insured of its own duties and obligations with regard to safety matters, nor does Rockwood guarantee to the insured or others that the insured's property and/or operations are safe, healthful, or in compliance with applicable laws, regulations or standards. The insured remains responsible for its own operations, safety practices and procedures and should consult with legal counsel and safety professionals, of its own choosing, as it deems appropriate.

Toolbox Safety Talks

Tight Working Areas

7) Is there any way we can avoid having to work in any of our tight spaces?

8) Has anyone ever been injured while working in a tight space?

Make Time for Safety, Everyday! – Yes, production is important, *but the focus must be on Safe Production!* Keep that in the back of your mind. Don't take risky chances and stay out of harm's way. Nobody goes to work thinking 'I'm going to get hurt or killed on the job today!' But every day 15,000-17,000 workers suffer disabling injuries on the job and another 11-17 are killed. *What are you doing to make sure it doesn't happen on your shift?*

Keep stoking the fire; we can't let the 'Safety Train' run out of steam!
